Construction Calculations Manual

Synopsis

Construction Calculations is a manual that provides end users with a comprehensive guide for many of the formulas, mathematical vectors and conversion factors that are commonly encountered during the design and construction stages of a construction project. It offers readers detailed calculations, applications and examples needed in site work, cost estimation, piping and pipefitting, and project management. The book also serves as a refresher course for some of the formulas and concepts of geometry and trigonometry. The book is divided into sections that present the common components of construction. The first section of the books starts with a refresher discussion of unit and systems measurement; its origin and evolution; the standards of length, mass and capacity; terminology and tables; and notes of metric, U.S, and British units of measurements. The following concepts are presented and discussed throughout the book: Conversion tables and formulas, including the Metric Conversion Law and conversion factors for builders and design professionals Calculations and formulas of geometry, trigonometry and physics in construction Rudiments of excavation, classification, use of material, measurement and payment Soil classification and morphology, including its physicochemical properties Formulas and calculations needed for soil tests and evaluations and for the design of retaining structures Calculations relating to concrete and masonry Calculations of the size/weight of structural steel and other metals Mechanical properties of wood and processing of wood products Calculations relating to sound and thermal transmission Interior finishes, plumbing and HVAC calculations Electrical formulas and calculations Construction managers and engineers, architects, contractors, and beginners in engineering, architecture, and construction will find this practical guide useful for managing all aspects of construction. Work in and convert between building dimensions, including metric Built-in right-angle solutions Areas, volumes, square-ups Complete stair layouts Roof, rafter and framing solutions Circle: arcs, circumference, segments

Book Information

Paperback: 700 pages

Publisher: Butterworth-Heinemann; 1 edition (October 7, 2011)

Language: English

ISBN-10: 0123822432

ISBN-13: 978-0121822088

Product Dimensions: 7.5 x 1.4 x 9.2 inches

Shipping Weight: 2.5 pounds (View shipping rates and policies)

Average Customer Review: 5.0 out of 5 stars See all reviews (1 customer review)

Best Sellers Rank: #2,960,407 in Books (See Top 100 in Books) #61 in Books > Crafts, Hobbies & Home > Home Improvement & Design > How-to & Home Improvements > Roofing #340 in Books > Crafts, Hobbies & Home > Home Improvement & Design > How-to & Home Improvements > Estimating #386 in Books > Crafts, Hobbies & Home > Home Improvement & Design > How-to & Home Improvements > Contracting

Customer Reviews

This book contains all the detailed calculations you would need regarding site work, piping and pipe fitting, cost estimation, and overall project management. This is a comprehensive one-stop-shop book is aimed at the construction professional in the Architectural Engineering and Construction sectors and is a valuable construction calculations guide ranging from most common to the very difficult. This text covers all aspects in construction; It's all in here. Topics include: Site work, concrete and masonry, steel and misc. metals, lumber (trim and framing), thermal & sound insulation, interior finishes, plumbing & HVAC, electrical calculations and unit conversion tables. If you are looking for an all inclusive reference book that furnishes all the above topic ranges then do not hesitate to include this essential book to your library. I am very pleased with my purchase.
